Re: Subjects for addictivium research

Today, we will be gaining another subject for research on addictivium. He has graciously volunteered to take part in this important research. Connor Arter will be arriving at our facility at around 1pm today to begin the regimen.

Our research should be completed promptly so we can continue to increase the amount of addictivium in our water supplies to ensure the future progress of Aguatero Industries.

The following subjects should be used for experiments conducted this week. They have already signed all waivers and will be living in arrangements created by Aguatero Industries to ensure their own health and well-being.

C. Arter
A. Baker
R. Evans
J. Lopez
M.T. Moore
S. Patterson
M. Ray
L. Smith
P. Thomas
A. Woods
L. Yang

As usual, accelerated research is appreciated. Working at a slow pace does not match with Aguatero Industries. Expanding our operation is vital to our company's future success. Research and development is important to continue to ensure markets love our product.

You know the procedure for disproven hypotheses.

Have a good week,

L. Rodriguez
